The global CCTV Camera Lenses market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

There are two main CCTV camera lens types: fixed lens (aka. monofocal lens) and varifocal lens (these include motorised lenses).

A CCTV security camera that has a fixed lens is permanently set, meaning that its angle of view, focal length and level of zoom cannot be changed.

On the other hand, a CCTV camera with a varifocal lens will allow users to adjust the camera's focal length, and consequently its field of view and level of zoom. This means that the lens can zoom in to capture a close view from a long distance (reducing the Field of View, but providing a clearer image of details such as licence plates, or perpetrators' faces), or zoom out to capture a wide area (increasing the Field of View).

United States market for CCTV Camera Lenses is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for CCTV Camera Lenses is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for CCTV Camera Lenses is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
