The global Ceiling-mount Fan Coil Unit market size is predicted to grow from US$ 1424 million in 2025 to US$ 1840 million in 2031; it is expected to grow at a CAGR of 4.4% from 2025 to 2031.

Ceiling-mount fan coil unit is a kind of air conditioning equipment, usually installed on the suspended ceiling of the building. It consists of a fan and a heat exchanger that can be used to heat or cool air and distribute it to different rooms in a building. A ceiling-mount fan coil unit usually consists of a metal enclosure, a fan, a heat exchanger, a control panel, and some piping and wires. They can heat or cool air with water or steam, or with electricity.

Fan coil units are widely used in commercial buildings, office buildings, hotels, hospitals, schools and other fields. Among them, commercial construction is the most important application area, accounting for the majority share of this market. In commercial buildings, fan coil units are mainly used in central air conditioning systems to provide comfortable temperature and air quality indoors. In the future, the fan coil market will continue to grow, mainly benefiting from the growth and upgrading of building air conditioning systems. At the same time, with the improvement of environmental protection awareness and the rise of energy costs, energy-saving and environment-friendly fan coil units will become the mainstream trend in the market.
