Celiac disease, also known as celiac sprue or gluten-sensitive enteropathy, is a genetic autoimmune disorder caused due to the body's inability to process gluten that causes damage to the small intestine. Gluten, a protein found in wheat, barley, and rye, can damage the lining of the small intestine which makes it difficult for the body to absorb nutrients such as iron, fat, calcium, and folate. The immune system mistakes substances inside gluten to be a threat to the body and attacks them, in turn, causing damage to the bowel surface and hampering the body's ability to absorb nutrition. Digestion problems, dermatitis herpetiformis, abdominal pain, weight loss, musculoskeletal problems, aphthous ulcers, iron deficiency, stunted growth, tingling sensation in the leg, and missed menstrual cycles are some of the symptoms of celiac disease. The disease can lead to various complications and health problems such as miscarriage or infertility, intestinal cancer, osteoporosis, seizures, gall bladder malfunction, neurological manifestation of the disease, stunted growth in children, and birth defects. Celiac disease can also lead to various autoimmune diseases such as lupus, thyroid disease, Sjögren's syndrome, type 1 diabetes, and rheumatoid arthritis. It is difficult to diagnose celiac disease in the initial stages as its symptoms are similar to those of other diseases. Various sensitive and selective blood tests such as anti-tissue transglutaminase antibodies with or without IgA level and IgA anti-endomysial antibodies are used to screen the disease.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of

5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
