The global Cell Cryopreservation Bags market size is predicted to grow from US$ 638 million in 2025 to US$ 849 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

In 2024, global cell cryopreservation bags production reached approximately 25,000,000 units, with an average global market price of around US$ 25 per unit. Cell cryopreservation bags are specialized containers used for the safe and long-term preservation of living cells at ultra-low temperatures. Typically made from biocompatible materials (such as multi-layer composite EVA (ethylene vinyl acetate) films), they offer excellent cryogenic resistance, sealing, and sterility, effectively preventing sample contamination and ice crystal damage. They are widely used in fields such as cell therapy, biopharmaceuticals, and stem cell banks.The upstream of the cell cryopreservation bag industry chain mainly includes suppliers of medical polymer materials (such as EVA particles), sterile packaging materials, valve interfaces and other accessories; the midstream is the research and development, production and manufacturing (including film blowing, bag making, sterilization, testing and other links) and packaging of cryopreservation bags, and participants include internationally renowned biotechnology companies and local manufacturers; the downstream is widely used in cell therapy (such as CAR-T), gene therapy, biopharmaceutical production, stem cell banks, scientific research institutes and hospitals, and its development is closely linked to the global biomedicine R&D investment and the expansion of the cell therapy market.

United States market for Cell Cryopreservation Bags is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
