The global Cell Culture Media Customization market size is predicted to grow from US\$ 6439 million in 2025 to US\$ 9920 million in 2031; it is expected to grow at a CAGR of 7.5% from 2025 to 2031.

Cell culture media customization refers to the process of tailoring the composition of cell culture media to meet the specific requirements of a particular cell culture system or experiment. Cell culture media are nutrient-rich solutions that provide essential nutrients, growth factors, and environmental conditions to support the growth and proliferation of cells in a laboratory setting. Customizing the media involves adjusting various components to optimize cell growth, maintain cell health, and achieve specific research or production goals.

The trend toward developing and using serum-free and defined media formulations continued. These media reduce variability and provide more controlled conditions for cell culture.
