Cell Culture Media is a nutrient that artificially simulates the in vivo growth environment of animal cells and maintains the survival and proliferation of cells in vitro. It is the basic substance for providing cell nutrition and promoting cell reproduction and proliferation in cultured cells, and is also the living environment for the growth and reproduction of cultured cells.

Feeds are nutrients that are added continuously or intermittently during the fermentation process. This operation is designed to meet the changing nutritional needs of cells during growth and production, so as to maintain or improve the growth rate and production efficiency of cells.

The global Cell Culture Media and Feeds market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
