The global Cell Filling System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The Cell filling system is a high-throughput automated filling device designed for the production and preparation of cell therapy products. It is used for automatic and rapid capping, filling and capping of frozen storage tubes, minimizing sample exposure to cryoprotectants while preventing the risk of contamination caused by manual repetitive operation tasks. It is widely used to create cell banks, strain banks, plasmid banks and automatic filling of biological products with better quality and consistency. With closed sterile disposable pipe bag and frozen storage bag, the filling process of more than 100 bags of cell can be realized.

United States market for Cell Filling System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
