The global Cell-Site Simulators market size is predicted to grow from US\$ 159 million in 2025 to US\$ 309 million in 2031; it is expected to grow at a CAGR of 11.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Cell-Site Simulators or IMSI Catcher (an international mobile subscriber identity-catcher), refers to a type of electronic surveillance equipment that collects information about nearby mobile devices. This is done either passively, by intercepting the radio signals already being transmitted between a mobile device (such as a mobile phone) and a mobile base-station (cell tower); or actively, by presenting itself to nearby mobile communication devices as a legitimate mobile base-station, thereby fooling devices to connect to the IMSI-catcher itself allowing further interception of information from the devices.

The Cell-Site Simulators or IMSI Catcher industry was 96 million USD in 2018 and is projected to reach USD 192 million USD by 2025, at a CAGR (Compounded Annual Growth Rate) of 9.63% between 2019 and 2025. The IMSI catcher first emerged in the early 1990s. Over the past decade, a series of lawsuits was filed in connection with IMSI catcher use and civil rights organizations and journalists began to ask questions.
