Abstracts

The global Cell-Top Thermal Runaway Potting Compound market size is predicted to grow from US\$ 176 million in 2025 to US\$ 672 million in 2032; it is expected to grow at a CAGR of 20.5% from 2026 to 2032.

Cell-Top Thermal Runaway Potting Compound is a low-density, flame-retardant, thermally insulating potting material applied or dispensed on the tops of lithium-ion battery cells, including areas around the cell terminals, busbars, bonding wires, vent valves, and local module cavities. Its primary function is to delay the propagation of flames, high-temperature ejecta, and hot gases to adjacent cells and the battery pack during single-cell thermal runaway, while also providing electrical insulation, mechanical cushioning, moisture and dust protection, and local sealing. The estimated overall gross margin is approximately 39%.

Cell-top thermal runaway potting compounds are a specialized, structural, and highly customized subcategory of battery pack thermal safety materials. Their value is not limited to filling and sealing gaps but lies in forming flame-retardant, thermally insulating, electrically isolating, and cushioning layers around cell terminals, busbars, sampling harnesses, and cover plate perimeters. This reduces the risk of flames, high-temperature particles, and conductive debris propagating upward into the electrical connection area during thermal events.

Market growth is primarily driven by the demand for more refined thermal runaway protection designs in automotive and energy storage batteries. Compared with sheet materials such as inter-cell thermal pads, mica sheets, and aerogel mats, cell-top potting compounds are better suited for complex and irregular spaces, providing combined sealing, moisture protection, fixation, insulation, and flame/thermal barrier

functionality. Trade-offs exist between thermal conductivity, density, curing speed, expansion ratio, and serviceability, making them especially suited for high-safety prismatic cell modules, cylindrical cell arrays, and energy storage clusters.

In the near term, the market is dominated by project-based introduction and customized formulations. Standardization is low, and the market scale is smaller than inter-cell thermal pads and conventional structural adhesives. However, as battery packs evolve from passive insulation to zoned thermal barriers, localized encapsulation, and thermal runaway path management, low-density, flame-retardant, and automation-compatible top potting compounds are expected to see higher growth. Future competition will focus on low-smoke, low-toxicity formulations, lightweight design, rapid curing, high-temperature impact resistance, and compatibility with battery pack manufacturing cycles.

LP Information, Inc. (LPI) ' newest research report, the "Cell-Top Thermal Runaway Potting Compound Industry Forecast" looks at past sales and reviews total world Cell-Top Thermal Runaway Potting Compound sales in 2025, providing a comprehensive analysis by region and market sector of projected Cell-Top Thermal Runaway Potting Compound sales for 2026 through 2032. With Cell-Top Thermal Runaway Potting Compound sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US\$ millions of the world Cell-Top Thermal Runaway Potting Compound industry.

This Insight Report provides a comprehensive analysis of the global Cell-Top Thermal Runaway Potting Compound landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Cell-Top Thermal Runaway Potting Compound portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms' unique position in an accelerating global Cell-Top Thermal Runaway Potting Compound market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Cell-Top Thermal Runaway Potting Compound and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Cell-Top Thermal Runaway Potting Compound.

This report presents a comprehensive overview, market shares, and growth opportunities of Cell-Top Thermal Runaway Potting Compound market by product type, application, key manufacturers and key regions and countries.

Segmentation by Type:

Silicone Potting Compound

Polyurethane Potting Compound

Epoxy Potting Compound

Other Resin Potting Compound

Segmentation by Thermal Conductivity:

Low Conductivity

Contents

1 SCOPE OF THE REPORT

- 1.1 Market Introduction
- 1.2 Years Considered
- 1.3 Research Objectives
- 1.4 Market Research Methodology
- 1.5 Research Process and Data Source
- 1.6 Economic Indicators
- 1.7 Currency Considered
- 1.8 Market Estimation Caveats

2 EXECUTIVE SUMMARY

2.1 World Market Overview

- 2.1.1 Global Cell-Top Thermal Runaway Potting Compound Annual Sales 2021-2032
- 2.1.2 World Current & Future Analysis for Cell-Top Thermal Runaway Potting Compound by Geographic Region, 2021, 2025 & 2032
- 2.1.3 World Current & Future Analysis for Cell-Top Thermal Runaway Potting Compound by Country/Region, 2021, 2025 & 2032
- 2.2 Cell-Top Thermal Runaway Potting Compound Segment by Type
 - 2.2.1 Silicone Potting Compound
 - 2.2.2 Polyurethane Potting Compound
 - 2.2.3 Epoxy Potting Compound
 - 2.2.4 Other Resin Potting Compound
 - 2.2.5 Cell-Top Thermal Runaway Potting Compound Sales by Type
 - 2.2.5.1 Global Cell-Top Thermal Runaway Potting Compound Sales Market Share by Type (2021-2026)
 - 2.2.5.2 Global Cell-Top Thermal Runaway Potting Compound Revenue and Market Share by Type (2021-2026)
 - 2.2.5.3 Global Cell-Top Thermal Runaway Potting Compound Sale Price by Type (2021-2026)
- 2.3 Cell-Top Thermal Runaway Potting Compound Segment by Thermal Conductivity
 - 2.3.1 Low Conductivity
