Cellular Distributed Antenna System (Cellular DAS) is an advanced, in-building wireless communication system designed to improve cellular network coverage and capacity within large or challenging environments (e.g., buildings, campuses, underground facilities). It consists of a network of antennas that distribute wireless signals (typically from cellular networks) throughout a building or other enclosed space, ensuring reliable mobile connectivity for voice calls, text messaging, and data services.

A Cellular DAS amplifies and redistributes cellular signals to areas with poor reception, addressing issues like dead zones, weak signals, or network congestion caused by the building's physical structure.

United States market for Cellular DAS is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Cellular DAS is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
