The report requires updating with new data and is sent in 48 hours after order is placed.

The global Chlorinated Flame Retardant market size is predicted to grow from US$ 1162 million in 2025 to US$ 1650 million in 2031; it is expected to grow at a CAGR of 6.0% from 2025 to 2031.

Chlorinated flame retardants are still widely used because of their low price. Chlorinated paraffin with the highest chlorine content is an important flame retardant in industry. Due to its poor thermal stability, it is only suitable for composite materials with processing temperature less than 200?. Chlorinated lipopyclic hydrocarbon and tetrachloro-phthalic anhydride have higher thermal stability and are commonly used as flame retardants for unsaturated resin.

The market for flame retardants, including chlorinated types, is influenced by fire safety regulations and consumer awareness. Trends focus on developing more environmentally friendly flame retardant alternatives while maintaining efficacy.
