The report requires updating with new data and is sent in 48 hours after order is placed.

Cellular routers connect to carrier networks and then use the acquired signals to securely route data between connected LAN devices and endpoints such as enterprise data centers. It allows enterprises or government entities to provide data connectivity virtually anywhere while extending enterprise security to edge solutions. Cellular gateways often act as 'aggregators' and converters of device data. For example, a gateway can collect data from dozens of field devices and convert the data into IP protocol before sending it over a cellular network. Therefore, the most important function of a cellular gateway is protocol conversion. The gateway can receive protocols such as Zigbee, WiredHART or Modbus and convert the data into a format that can be easily sent over the wireless network.

The global Cellular Routers and Cellular Gateways market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
