The global Cellulose-Based Food Packaging Film market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Cellulose-based food packaging film is a sustainable and biodegradable material derived from natural plant fibers, such as wood pulp or cotton, designed for wrapping and protecting food products. Currently, these films are gaining popularity due to their eco-friendly properties, high transparency, and effective barrier against moisture and gases, making them suitable for various applications such as packaging snacks, bakery items, and fresh produce. Development trends in this sector are focused on enhancing the functional properties of cellulose films, such as improving their mechanical strength and heat-sealability, and incorporating additional barrier coatings to extend the shelf life of food products. Additionally, there is a significant push towards scaling up production and reducing costs to make these films more competitive with conventional plastic packaging, driven by increasing consumer demand for environmentally friendly packaging solutions and stringent regulatory requirements aimed at reducing plastic waste.
