The global Cellulose Phosphate market size is predicted to grow from US\$ 19.81 million in 2025 to US\$ 27.22 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

In 2025, global Cellulose Phosphate sales volume is estimated at approximately 13.5 tons, with a global average market price of about USD 1,500/kg. The gross margin of major producers is generally estimated at 35%-55%.

Cellulose Phosphate is a functionalized cellulose material produced by phosphorylation modification of cellulose, with CAS No. 9015-14-9. Phosphate groups are introduced onto the cellulose molecular backbone, giving the product hydrophilicity, ion-exchange properties and a certain capacity for cation binding. It can be supplied in forms such as powder, particles, microspheres, membrane sheets or paper sheets. Its core value lies in the functional sites provided by phosphate groups. It is mainly used for the separation and purification of biomacromolecules such as proteins, enzymes and peptides, and can also be extended to adsorption, flame-retardant materials and functional fillers.

The upstream of the Cellulose Phosphate industry chain mainly includes cellulose raw materials, phosphorylation reagents, alkalis, solvents, crosslinking agents and packaging materials. Key technical factors include cellulose substrate purity, degree of phosphorylation substitution, ion-exchange capacity and morphology control. The midstream consists of functionalized cellulose material producers and chromatography media manufacturers, which produce different grades of Cellulose Phosphate through phosphorylation modification, washing and purification, granulation/forming and quality control. Downstream applications mainly cover Medicine, Food, Environmental Protection, Functional Material and Other fields, with product value concentrated in batch-to-batch stability, binding capacity, flow performance, impurity control and final separation or adsorption performance.

United States market for Cellulose Phosphate is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Cellulose Phosphate is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
