A Cement Retainer is a downhole tool used in oil and gas wells to create a temporary barrier, allowing controlled placement or isolation of cement in specific wellbore sections. Positioned typically in the casing or tubing, it prevents cement backflow and supports operations such as squeeze cementing or zonal isolation. Cement retainers are designed to withstand high pressure and ensure accurate cementing, which is critical for well integrity, preventing fluid migration, and optimizing production. They can be permanent or retrievable, depending on the application requirements.
