A Cemented Carbide Cutting Blade, often referred to as a hard metal cutting blade, is a cutting tool made from cemented carbide material. Cemented carbide, also known as tungsten carbide, is a composite material consisting of tungsten carbide particles (hard carbide phase) held together in a binder matrix of cobalt or other metals (usually referred to as the metallic binder phase).

Cemented carbide cutting blades are known for their exceptional hardness, wear resistance, and durability. They are widely used in various machining and cutting applications, such as metalworking, woodworking, plastic processing, and more. These cutting blades can be designed in various shapes and configurations to suit specific cutting tasks, whether it involves milling, turning, drilling, or other machining operations. Their hardness and sharpness make them effective tools for precision cutting and shaping of materials in different industries.
