The global CEMS Dust Monitors market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Continuous Emissions Monitoring Systems (CEMS) consist of a series of gas analyzers for various air pollutants being monitored. Dust Monitor uses the light transmission technique to measure the visible opacity of exhaust gas in a duct, stack, or flue, in which a high-intensity light beam is projected across the stack. Any dust, smoke, or particulate present will attenuate the transmitted light, and the decrease in light intensity, due to absorption and scattering, is measured.
