Center Irrigation Pivot is a highly efficient irrigation device widely used in the agricultural field, usually used for water distribution in large areas of farmland. It consists of a central rotating shaft, multiple telescopic arms and sprinklers. The water source is transported to the central pivot by a water pump, and then the water is evenly sprayed on the surrounding land through the rotating arm. The biggest feature of this system is that it covers the entire farmland through rotational movement, achieves uniform distribution of water, and ensures that crops get enough water. The center pivot irrigation system can reduce the waste of water resources and effectively improve irrigation efficiency. It is an indispensable and important tool in modern agricultural production.
