The global Central Egg Conveyor market size is predicted to grow from US$ 106 million in 2025 to US$ 134 million in 2032; it is expected to grow at a CAGR of 3.5% from 2026 to 2032.

A central egg conveyor is an automated device used to transport eggs from the laying area to the packaging area. It uses conveyor belts, chains, or roller systems to move eggs safely and stably to designated locations, reducing the need for manual handling. This equipment is typically designed with a central control system, enabling highly efficient egg transport. It is widely used in poultry processing plants, farms, and packaging workshops to improve production efficiency and reduce egg damage.

Upstream suppliers include steel and plastic component manufacturers, motor and reducer suppliers, chain and conveyor belt manufacturers, anti-corrosion coating manufacturers, and control components. Downstream suppliers primarily target large-scale egg farms, egg grading and packaging plants, food processing enterprises, and large agricultural and livestock groups—centralized breeding and egg processing terminals.

In 2024, the global central egg conveyor market price was $23,080 per unit, with sales of approximately 4,500 units. Global production capacity was 4,800-5,000 units, and the industry profit margin was 20-25%.
