The global Central Impression Flexographic Printing Press market size is predicted to grow from US\$ 840 million in 2025 to US\$ 1186 million in 2031; it is expected to grow at a CAGR of 5.9% from 2025 to 2031.

The satellite flexo printing machine is used to complete the color printing sleeve on the common printing press. As the printed material is pressed to the cylinder, the material's tension changes very little, and the material becomes smaller when it is dry. The machine is compact and the paper route is short. Therefore, it is especially suitable for the printing of thin materials with more difficult control of width and tension, and the overprinting precision is higher than the stack types.

Central Impression Flexographic Printing Press is a printing equipment used for printing packaging materials, labels and other flexible materials. It uses flexographic printing technology, which is a common printing type in the modern printing industry. The satellite flexo printing machine adopts the central printing (Central Impression) method, in which the printing material is transferred between the printing wheel (satellite) and the printing plate, so as to achieve high-precision printing. This type of flexo printing machine is usually equipped with several printing units, each unit is responsible for a color. By working together, multi-color printing can be achieved, including four-color (CMYK) printing and printing of special colors. Satellite flexo printing machine is suitable for printing various flexible materials, such as film, paper, film, etc., for packaging, labels, posters and other applications. Due to the central printing method, satellite flexo presses can achieve highly accurate printing and are suitable for applications requiring high-quality images and text. The modern satellite flexo printing machine is equipped

with advanced automatic control system, which can realize quick adjustment and setting, and improve production efficiency. Satellite flexo printing machines are widely used in food packaging, beverage packaging, pharmaceutical packaging, label printing and other industries.
