Central nervous system (CNS) disease is a broad category of conditions in which the brain does not function as it should, limiting health and the ability to function. The condition may be an inherited metabolic disorder; the result of damage from an infection, a degenerative condition, stroke, a brain tumor or other problem; or arise from unknown or multiple factors. Movement disorders such as Parkinson's disease, dystonia, and essential tremor are central nervous system conditions. What they have in common is the loss of sufficient, intact nervous system circuits that orchestrate functions as varied as memory formation (in Alzheimer's) or voluntary motion (in movement disorders).

The presence of strong pipeline products is expected to drive the central nervous system therapeutics market over the forecast period. Major pharmaceutical companies are focusing on new treatments to prevent or improve symptoms of neurological diseases.
