The global Central Vascular Access Device market size is predicted to grow from US\$ 2329 million in 2025 to US\$ 3485 million in 2031; it is expected to grow at a CAGR of 7.0% from 2025 to 2031.

Central venous/vascular access devices are small, flexible tubes placed in large veins for people who require frequent access to the bloodstream. Venous access devices that can be implanted under the skin were introduced in 1982. They allow medications to be delivered directly into larger veins, are less likely to clot, and can be left in for long periods. The CVAD may contain one or two tubes. When a CVAD contains two tubes, it is called a double or dual lumen catheter and may also be used for injecting contrast for CT or MRI scans (depending on type of CVAD).

Global Central Vascular Access Device key players include C. R. Bard, Inc., Teleflex Incorporated, Terumo Corporation, etc. Global top three manufacturers hold a share nearly 55%.

North America is the largest market, with a share over 45%, followed by Europe, and Asia-Pacific, both have a share about 50 percent.

In terms of product, PICC is the largest segment, with a share over 45%. And in terms of application, the largest application is Hospital, followed by Non-Hospital.
