High-quality centralized clock generators are designed to produce clock signals with very low jitter (timing variations) and low phase noise. This is important for maintaining signal integrity, reducing errors, and enhancing overall system performance. Some centralized clock generators support spread spectrum clocking to reduce electromagnetic interference (EMI). By slightly modulating the clock frequency, SSC helps systems comply with regulatory requirements for EMI emissions.

The global Centralized Clock Generator market size is projected to grow from US\$ 1285 million in 2024 to US\$ 2038 million in 2030; it is expected to grow at a CAGR of 8.0% from 2024 to 2030.
