Centrally Controlled Fire Emergency Lighting and Evacuation Indication System is a specialized safety and protection system designed to provide reliable emergency illumination and dynamic evacuation guidance under fire or other hazardous conditions, with all devices centrally monitored and controlled by a management unit. Unlike independent emergency lighting systems, this centrally controlled system connects emergency luminaires, exit signs, power supply units, and control modules to a central controller through wired or wireless networks, enabling unified supervision, intelligent decision-making, and real-time command. When a fire alarm is triggered, the system automatically switches on emergency lighting and displays evacuation routes through illuminated indicators.
