A centrifugal compressor for a chiller is a dynamic compression device that uses centrifugal force to accelerate and pressurize refrigerant gas, enabling efficient heat transfer in large-scale cooling systems. Commonly used in commercial buildings, data centers, and industrial facilities, these compressors operate at high speeds and are known for their energy efficiency, compact design, and low maintenance requirements. By utilizing impellers to increase the kinetic energy of the refrigerant and diffusers to convert it into pressure, centrifugal compressors are ideal for delivering high-capacity cooling in a reliable and cost-effective manner.
