Medical-grade ceramics is a material that is widely used in applications such as the development of prosthetics, implants, medical tools and devices. Medical applications of ceramics include the repair or replace musculoskeletal hard human connective tissues. They also have clinical applications such as orthopedic implants, dental implants, and bone screws. Bioinerts and bioactive are the two leading families of bioceramics. All medical ceramics share the property of time-dependent kinetic alteration of the surface following implantation as one of their common characteristics. Additionally, it naturally develops a coating of biologically functional carbonate hydroxyapatite that acts as a strong bonding agent for living tissue.

The global Ceramic Biomaterial Implant market size is projected to grow from US\$ 25240 million in 2024 to US\$ 36690 million in 2030; it is expected to grow at a CAGR of 6.4% from 2024 to 2030.
