The global Ceramic-Coated Deep Groove Ball Bearings market size is predicted to grow from US$ 929 million in 2025 to US$ 1133 million in 2032; it is expected to grow at a CAGR of 2.9% from 2026 to 2032.

Ceramic-coated deep groove ball bearings are a type of bearing that features a thin, insulating ceramic coating (typically made from aluminum oxide) applied to the outer or inner race. This coating prevents electrical currents from passing through the bearing, protecting it from damage caused by electrical arcing, such as fluting or pitting, which commonly occur in electric motors and generators. These bearings retain the standard steel construction for rolling elements and races, ensuring durability and load-carrying capability while adding electrical insulation for applications where electrical discharge can be an issue.
