Abstracts

The global Ceramic Glass market size is predicted to grow from US\$ 53800 million in 2025 to US\$ 111820 million in 2031; it is expected to grow at a CAGR of 13.0% from 2025 to 2031.

Ceramic Glass, also known as high-temperature ceramic, new ceramic, or robax glass, is a high-temperature glass designed to handle extreme heat up to 1470 degrees Fahrenheit (3/16 inch thick or 5 mm).

Increasing participation in sports by women is expected to drive the global sports bra market. The sale of sports bras is one of the few industries that serves a very specialized consumer base, but that group is growing rapidly. Female sports spectatorship is influenced by a variety of factors. Price-sensitive consumers restrict market growth. Consumer price sensitivity is common, especially in the sportswear market. Sports bras, especially ones of good quality and design, can be quite expensive. Cost-conscious consumers may opt for cheaper alternatives, which could slow the market expansion of the high-end sports bra business. Hence, this is expected to be a major limiting factor for the growth of the sports bra market during the forecast period.
