Ceramic knife gate valve, also known as ceramic knife gate valve and ceramic knife gate valve. Its opening and closing part is a ram. The movement direction of the ram is perpendicular to the fluid direction. The medium is cut off by a knife edge ram that can cut fiber materials. In fact, there is no chamber in the valve body of ceramic knife gate valve. The gate rises and falls in the side guide groove and is tightly pressed on the valve seat by the lug at the bottom. If it is necessary to achieve high medium tightness, the O-shaped sealing valve seat can be selected to realize two-way sealing
