Ceramic paints are paints that contain ceramic particles in urethane or silicone paints. They have high durability, heat resistance, water resistance, and chemical resistance, and are used in a wide range of applications. Ceramic particles are made from oxides such as silicon dioxide and alumina, which are highly durable and heat resistant. Adding these ceramic particles to paints makes the paints harder and improves abrasion and chemical resistance.

Ceramic paints are often used in places where durability is required, such as car and ship paints. It is particularly suitable for use under high temperatures. They are also used in applications where water resistance is required, such as the painting of household goods and exterior walls of buildings.

United States market for Ceramic Paints is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
