The global Ceramic PTC Thermistor & Device market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Ceramic PTC Thermistor is a specialized type of Positive Temperature Coefficient (PTC) thermistor primarily constructed using ceramic materials. These devices exhibit an increase in electrical resistance with rising temperature, making them invaluable for various electronic protection and temperature sensing applications. The use of ceramic materials ensures high reliability and fast protection after short circuits, making equipment safer and maintenance-free. Compared with organic PTC elements and chip resistors with similar characteristics, the ceramic thermistor offers higher voltage withstand capability and greater power capacity, allowing for a reduction in chip size. This contributes to equipment downsizing.
