Ceramic PTC heater is a heating element made by using the positive temperature coefficient characteristics of ceramic materials. When the temperature rises, the resistance of the PTC material increases, resulting in a self-limiting thermal effect, which keeps the temperature of the heater within a set stable range. This heating element has the advantages of low starting current, fast temperature rise, stable heat output, safety and reliability. It is widely used in electronic products that require temperature control, such as air conditioners, electric water heaters, fan heaters, electric toothbrushes, etc. Ceramic PTC heaters can adjust their heating temperature and power by precisely controlling the current and material formula to meet the needs of different application scenarios.
