Ceramic capacitors are widely used component and found in almost every electrical device or instrument. The ceramic capacitors uses the ceramic materials to construct the dielectric. The ceramic capacitors are constructed by coating the two sides of the ceramic discs with silver and then stacked together. Single layer ceramic capacitors operates at a frequency of about 100 GHz and have high capacitance that ranges from few picofarads up to one or two microfarads. Ceramic capacitors does not have any polarity and hence they can be connected in any direction on the circuit boards.
