Ceramic slag discharge gate valve is a wear-resistant slag discharge gate valve made of wear-resistant ceramic lining at the erosion and wear parts of ordinary slag discharge valve, which not only retains the advantages of gate valve structure, but also improves the performance of erosion and wear resistance. There is a slag guide groove in the valve chamber, which can automatically remove the slag slurry, so as to prevent the loose closing of the valve caused by the slag at the bottom of the valve. It is suitable for slurry, slurry and other materials with long service life.
