The global Ceramic Thermistor market size is predicted to grow from US$ 2786 million in 2025 to US$ 4401 million in 2032; it is expected to grow at a CAGR of 6.9% from 2026 to 2032.

Ceramic Thermistor is a thermistor based on ceramic material. It has the characteristics of sensitive temperature response, high precision, good long-term stability, high temperature resistance and corrosion resistance. The resistance value of ceramic thermistor changes with temperature, and it is usually used in temperature measurement, overheat protection, temperature compensation and other fields. According to different response temperature ranges, ceramic thermistors can be divided into negative temperature coefficient (NTC) and positive temperature coefficient (PTC).

One of the primary growth factors for the ceramic thermistor market is the rising adoption of electric and hybrid vehicles. These vehicles require advanced thermal management systems to ensure optimal performance and safety, driving the demand for high-quality temperature sensing components. Ceramic thermistors offer excellent reliability and precision, making them ideal for use in electric vehicle battery management systems. Additionally, government regulations and incentives promoting the use of electric vehicles are further bolstering market growth.
