Ceramic Transparent Armor refers to a class of advanced protective materials made from optically transparent ceramics such as aluminum oxynitride (AlON), magnesium aluminate spinel (MgAl_2O_4), sapphire (single-crystal Al_2O_3), and yttrium aluminum garnet (YAG). These materials combine high optical transmission with exceptional hardness, strength, and impact resistance, enabling protection against ballistic threats while maintaining visibility. Transparent ceramic armor is typically integrated into multilayer composite structures consisting of a ceramic strike face, polymer backing layers, and adhesive interlayers. It is widely used in armored vehicle windows, aerospace transparent domes, infrared sensor windows, and personal protection systems, where both optical clarity and ballistic resistance are required. In 2025, global Ceramic Transparent Armor production reached approximately 300 MT, average price was 100000 USD/Tons, with gross margin 40%.

United States market for Ceramic Transparent Armor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
