Ceramides are the same compounds found in human skin that replenish the skin's lipid barrier, promote turnover and reduce transepidermal water loss. Ceramide AP consists of a phytosphingosine backbone linked to a long-chain ω -hydroxystearic acid (AHA). Due to the presence of alpha-hydroxy acids in its structure, this ceramide has additional appeal for skin care preparations. Like other AHAs, it provides gentle exfoliation, promoting the natural peeling process to reveal an even, smooth, fresh complexion. Due to its gentle action, Ceramide AP is suitable for sensitive skin. It reduces fine lines and wrinkles, eliminates dead and dull cells, and improves barrier function—an ideal ingredient for anti-aging skin care products.

The global CeramideAP market size is projected to grow from US\$ 64.2 million in 2024 to US\$ 114 million in 2030; it is expected to grow at a CAGR of 10.0% from 2024 to 2030.
