## Abstracts

The global Cereal Seed Drill market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The driving factors for the development of grain drills mainly include the following aspects:

**Technological progress:** With the continuous advancement of agricultural machinery technology, the design and manufacturing technology of grain drills are also constantly improving, improving the accuracy, efficiency, reliability and adaptability of sowing. For example, the application of the airflow first-order distribution type seeding system enables the grain drill to achieve even seed distribution during the sowing process and improve the growth rate and yield of seeds.

**Market demand:** With the adjustment of agricultural planting structure and the development of large-scale planting, market demand has increasingly higher requirements for the performance and functions of grain drills, which has promoted the continuous development and improvement of grain drills. For example, the market demand for efficient, accurate, and intelligent grain drills has promoted the development and application of related technologies.

**Policy support:** Government policy support for agricultural mechanization is also an important factor in the development of grain drills. The government has provided policy support and financial support for the research and development, production and promotion of agricultural machinery, promoting the popularization and application of grain drills.

**Industry chain integration:** The manufacturing of grain drills involves multiple fields and industries, requiring the integration and collaboration of the industry chain. From parts

manufacturing, complete machine assembly to sales and service, the coordination of all links is required to achieve high-quality, efficient, and low-cost production and sales of grain drills.

**Agricultural modernization:** Agricultural modernization is another important factor in the development of grain drills. Agricultural modernization requires the transformation from traditional agriculture to modern agriculture and the improvement of the technical level and management level of agricultural production, and grain drills are an important tool and means to achieve this transformation.
