The global Cervical Screening market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Shift towards HPV Testing: Human Papillomavirus (HPV) testing has gained prominence as an effective method for cervical cancer screening. HPV testing is often used in conjunction with or as a replacement for Pap smears due to its higher sensitivity in detecting high-risk HPV strains associated with cervical cancer.

Liquid-Based Cytology: Liquid-based cytology (LBC) has become increasingly popular as an alternative to conventional Pap smears. LBC involves collecting cervical cells in a liquid medium, which can improve sample quality, reduce inadequate samples, and allow for additional testing such as HPV testing or molecular testing.
