The global Cervical Spinal Disc Prosthesis Implant market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A Cervical Spinal Disc Prosthesis Implant is a medical device designed to replace a damaged or degenerated cervical spinal disc in the human neck. This type of implant is used in a surgical procedure called cervical disc arthroplasty or cervical disc replacement surgery. The cervical spine, located in the neck, consists of seven vertebrae (C1 to C7) and the discs between them. These discs act as shock absorbers and allow for smooth movement of the neck.

As the aging population increases and lifestyle factors contribute to cervical spine issues, there is a growing demand for cervical spinal disc prosthesis implants. More patients may require these implants to alleviate pain and restore neck function.
