A cervical vertebra tractor, also known as a cervical traction device, is a therapeutic tool used to apply traction or gentle stretching to the cervical spine (neck area). It's commonly used to alleviate pain and discomfort in the neck, reduce pressure on the spinal discs, and improve mobility. This device is frequently employed in physical therapy, chiropractic care, and sometimes at home under professional guidance.

The cervical traction device typically comes in various forms:

1. ****Over-the-Door Traction:**** This type of cervical traction involves a harness or head halter attached to a weight and pulley system suspended over a door. The patient wears the harness, and the appropriate weight is applied to provide traction, gently

stretching the neck and relieving pressure on the cervical vertebrae.

2. ****Manual Cervical Traction:**** Administered by a healthcare professional, manual traction involves the therapist using their hands to apply traction to the patient's neck, gently stretching the cervical spine to relieve pain and stiffness.

3. ****Mechanical Cervical Traction Devices:**** These devices include a specialized table or chair equipped with a mechanism that allows controlled traction to the neck using adjustable settings. Some may use air pressure, others may use mechanical force to provide the desired traction to the cervical spine.

The goal of cervical traction is to create space between the vertebrae, thereby reducing pressure on the spinal discs, nerves, and surrounding tissues. This can alleviate pain associated with conditions like cervical disc herniation, cervical radiculopathy, muscle spasms, and some types of neck arthritis.

Cervical traction should be administered under the guidance of a healthcare professional, as inappropriate or excessive traction could potentially exacerbate certain conditions or cause further discomfort. It's essential for the device to be used correctly, with appropriate force and duration, as determined by a trained professional, to achieve the desired therapeutic effect without causing harm.

Always consult with a healthcare provider, such as a physical therapist, chiropractor, or physician, before using a cervical vertebra tractor or any cervical traction device to ensure it is suitable and safe for your specific condition.
