The global Cetyl Ethylhexanoate market size is predicted to grow from US$ 317 million in 2025 to US$ 434 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

Cetyl ethylhexanoate is a highly effective synthetic ester emollient used in cosmetics. It is colorless, odorless, and transparent, possessing excellent spreadability, breathability, and water resistance. It imparts a soft, moisturizing, and non-greasy feel to the skin. It is commonly used in various high-end skincare, makeup, and hair care products.

The upstream segment mainly consists of basic alcohol and acid raw materials. The core raw materials are cetyl alcohol (hexadecanol) and 2-ethylhexanoic acid. Cetyl alcohol is usually derived from the hydrogenation of natural vegetable oils (such as palm oil and coconut oil), reflecting the bio-based nature of the product.

Global sales in 2025 are projected to be approximately 52,450 tons, with an average market price of approximately US$6,170 per ton. The industry's gross profit margin is in the range of 15%-30%.

With the rise in popularity of cleansing oils and balms, cetyl ethylhexanoate has become the preferred alternative to traditional mineral oil due to its excellent ability to dissolve makeup and pigments and its easy rinsability. Simultaneously, consumers' increasing demand for refined textures has led brands to extensively use this ingredient in sunscreens, lipsticks, and eye care products to eliminate the stickiness of traditional oils and provide a silky, dry after-feel. Furthermore, global regulatory trends favoring sustainable raw materials have prompted large multinational ingredient suppliers to continuously optimize the carbon footprint of cetyl alcohol (extracted from plant oils such as palm oil), further strengthening the product's competitive advantage in high-end green supply chains.
