Chain handcuffs are a common police or security device used to restrict a person's hand movements. It consists of two handcuff wrist loops connected by a chain, making it impossible for the restrained person to completely separate their hands. Chain handcuffs are usually made of metal materials and have sufficient strength and durability to ensure that the restrained person cannot easily escape or remove the handcuffs. This type of handcuffs are often used by law enforcement agencies, security personnel, and the military alike to control and restrict the movement of detainees, prisoners, or suspects. Chain handcuffs are more flexible than other types of handcuffs and can be more easily adjusted to handle different wrist sizes.
