Chain conveyor belts are industrial conveyor belts composed of interconnected metal or synthetic links. They are characterized by high strength, high load-bearing capacity, and high durability, and are widely used in heavy industry, mining, metallurgy, automotive, and food processing industries for material conveying and processing in high-load, high-temperature, or abrasive environments. The chain conveyor belt industry chain includes upstream carbon steel, stainless steel, and alloy steel wire or synthetic polymers; midstream processes such as link manufacturing, heat treatment, assembly, surface treatment, and quality inspection; and downstream applications covering manufacturing plants, mining operations, logistics systems, and special material conveying industries, providing installation, maintenance, and repair services to ensure reliability and long-term performance. In 2025, the global production of chain conveyor belts was approximately 19.5 million square meters, with a global average market price of approximately US\$40 per square meter. The gross profit margin of major companies in the industry ranged from 25% to 40%. In 2025, the global production capacity of chain conveyor belts was approximately 23.44 million square meters.
