Chain slings are a commonly used lifting and hoisting device, primarily composed of interconnected metal chain links, typically made of high-quality alloy steel. Their main characteristics include: High load-bearing capacity: Chain slings possess extremely high load-bearing capacity, suitable for lifting heavy machinery and molds. Wear and high temperature resistance: Chain slings perform excellently in harsh environments and have a long service life. High safety: Chain slings have a high safety factor; overloading and torsion should be avoided during use. Chain slings are widely used in docks, power plants, metallurgy, and other fields to ensure safe and efficient operations.

The core upstream raw materials for chain slings include high-strength alloy steel, alloy steel welding wire, rust-proof/corrosion-proof coatings, lubricating oil, and heat treatment media. The core midstream processes include raw material pretreatment, chain link forming, heat treatment, surface treatment, and assembly. The core downstream application areas include engineering construction, energy and power, port logistics, engineering machinery and metallurgy, marine engineering and shipbuilding, etc.

In 2025, global sales of chain slings will reach 1.2 million tons, production will reach 1.6 million tons, the average selling price will be US\$1,022 per ton, and the average gross profit margin will be 26.5%.
