According to our LPI (LP Information) latest study, the global Chainsaw market size was valued at US\$ 1622.9 million in 2023. With growing demand in downstream market, the Chainsaw is forecast to a readjusted size of US\$ 2074.4 million by 2030 with a CAGR of 3.6% during review period.

The research report highlights the growth potential of the global Chainsaw market. Chainsaw are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Chainsaw. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Chainsaw market.

A chainsaw (or chain saw) is a portable gasoline, electric, or battery powered saw which cuts with a set of teeth attached to a rotating chain driven along a guide bar. It is used in activities such as tree felling, limbing, bucking, pruning, cutting firebreaks in wildland fire suppression and harvesting of firewood.

A chainsaw has two main parts: a saw blade built into a chain, wrapped around a long metal guide bar, and a small, one-cylinder gasoline (petrol) engine (sometimes an electric motor powered by a cord or battery pack). The chain is a bit like a bicycle chain, running around sprockets (gear wheels designed to turn a chain) only with about 30 or so sharp teeth (made from a hardened steel alloy) mounted around it at intervals. Inside the engine, as the piston moves in and out of the cylinder, it pushes a connecting rod that turns a crankshaft. The crankshaft turns gears that are connected (through a centrifugal clutch, explained below) to one of the sprockets on which the chain is

mounted—and the chain spins around.

Most manufacturers market chainsaw chains as chisel, semi-chisel, safety, full-skip, semi-skip or special purpose machines. Each type is used to cut different kinds of wood. The chisel type chain cuts faster than the other types of chains, but dulls faster. The semi-chisel type chain stays sharp longer than the chisel type and performs better in abrasive environments.

In the global Chainsaw Chains market, the main companies are Blount International, STIHL, Husqvarna and Makita, with a market share close to 40%. The main regions are Europe and the Asia-Pacific region, with a market share of over 65%. Full Chisel has the largest market share in Chainsaw Chains, exceeding 70%. The application scenarios of Chainsaw Chains are mainly concentrated in Gas Chainsaw, with a market share of over 60%. The North America region held the largest market share which can be attributed to the increasing demand for repair & remodelling of houses and new residential housing constructions.
