The global Chamber Seal market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Chamber Seal, means that for interior sealing, the main advantages are the physical strength and chemical resistance of the material. Graphite also has the advantage of increased sliding capacity due to its tribology, resulting in a longer service life (compared to polymers) and resistance to high temperatures. Applications up to 800°C are sealed with carbon floats. Caused by its tribology, this leads to a longer service life (compared to polymers) and resistance to high temperatures. High pressure applications are sealed with armoured carbon rings (non-split) with high mechanical strength.
