Channel impeller pump is a type of centrifugal pump characterized by an impeller with a wide channel structure, allowing liquids to flow smoothly without clogging, especially when handling long-fiber substances, suspended solids, or viscous media. Its working principle relies on centrifugal force generated by the rotating impeller to accelerate the medium from the inlet to the outlet, while fibrous or bulky impurities can pass through without obstruction, significantly reducing the risk of clogging. In 2024, the production was 1.94 million units and the average price was $3,900 per unit.

Globally, the vertical multistage centrifugal pump industry market is low concentrated as the manufacturing technology of vertical multistage centrifugal pump is relatively matures than some high-tech equipment. And some enterprises, like Grundfos, Ebara, KSB, WILO and Xylem, etc. are well-known for the wonderful performance of their vertical multistage centrifugal pump and related services, with about 54% market shares. Europe, North America and China are the major consumption regions and their market share is 24%, 21% and 27%.
