The global Channel Type Induction Furnace market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Channel Type Induction Furnace is an electric furnace that uses the principle of electromagnetic induction to generate an induced current in a conductive material (usually a metal) through a magnetic field generated by an induction coil, thereby heating the material. Unlike an induction heating crucible furnace, a channel type induction furnace has one or more channels with induction coils, through which the molten metal circulates to maintain a uniform temperature. This design allows the metal to be kept at a temperature below the melting point for a longer time while reducing heat loss.

United States market for Channel Type Induction Furnace is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
