A charge late analyzer is an instrument that evaluates the static elimination performance of an ionizer. The performance evaluation of ionizers for the purpose of controlling static electricity and static elimination is specified in the international IEC standard. Charge late analyzer is used to evaluate and monitor static elimination time and ion balance.

The charge late analyzer is supplied with a metal plate of a predetermined size, which is charged, and then the ionizer is activated to measure the decay time of the static charge. The ion balance is evaluated by measuring the electrostatic potential of the electrodes after a certain period with the metal plate uncharged.
